- Discussion and giving support for installing Ubuntu on your system

# What is GNU/Linux OS?

- Introduction to GNU/Linux
  - Free & Open-source operating system + series of free application to interact with your computer
  - GNU: GNU's Not Unix (recursive acronym)
  - GNU/Linux = Linux kernel + GNU Project programs
  - Linux is modelled on the Unix operating system

# What is GNU/Linux OS?

- Introduction to GNU/Linux
  - Multi-tasking, multi-user capable
  - Nobody owns Linux
  - Developing by unpaid volunteers.

# What is GNU/Linux OS?

- Introduction to GNU/Linux
  - GNU/Linux Logo
    - GNU: gnu head
    - Linux: tux (penguin)

# What is GNU/Linux OS?

- Brief History of GNU/Linux
  - GNU began in 1984 by Free Software Foundation
    - FSF Founder: **Richard Stallman**
  - GNU Project: Set of free software tools
  - Linux kernel first appeared in 1991
    - Created by **Linus Torvalds**

# What is GNU/Linux OS?

- Brief History of GNU/Linux
  - GNU Project + Linux kernel in 1992
  - It's not "Linux", its GNU/Linux
  - Non GNU/Linux: **Android** is powered by Linux kernel, but it's a non GNU/Linux

# What is a GNU/Linux Distributions?

- Introduction

- A customized version of GNU/Linux based on different version of Linux Kernel + GNU Software + Desktop Environment
- More than 600 distros exist

# What is a GNU/Linux Distributions?

- Popular Linux Distros

Debian

Ubuntu

Linux Mint

# What is Ubuntu Distro?

- Introduction
  - Linux distribution based on Debian
  - One of popular Linux distro
  - Mostly composed of Free & Open-Source software
  - Three editions:
    - Desktop: For desktop computers
    - Server: For Servers
    - Core: For IoT and robots

Ubuntu

Debian

# What is Ubuntu Distro?

## ■ Introduction

- Developed by Canonical
- Initial release: Oct 2004
- Latest release: Ubuntu 20.04 LTS
- Support Desktop Environments: GNOME, Xfce, LXDE, MATE, Cinnamon
- Full support for **R.O.S**, **Open-CV**, **PCL** etc.

Ubuntu

Debian

# Why we use GNU/Linux?

Absolutely Free

Thousands of  
applications

Customization

Safe & Secure

Work with SBC

Community

# Who is using Linux?

**SAMSUNG**

**ORACLE**

**facebook**

# Where Is Linux Used For?

Web Serving

# Installing Ubuntu Using Virtual Machine

# Installing Ubuntu using Virtual Machines

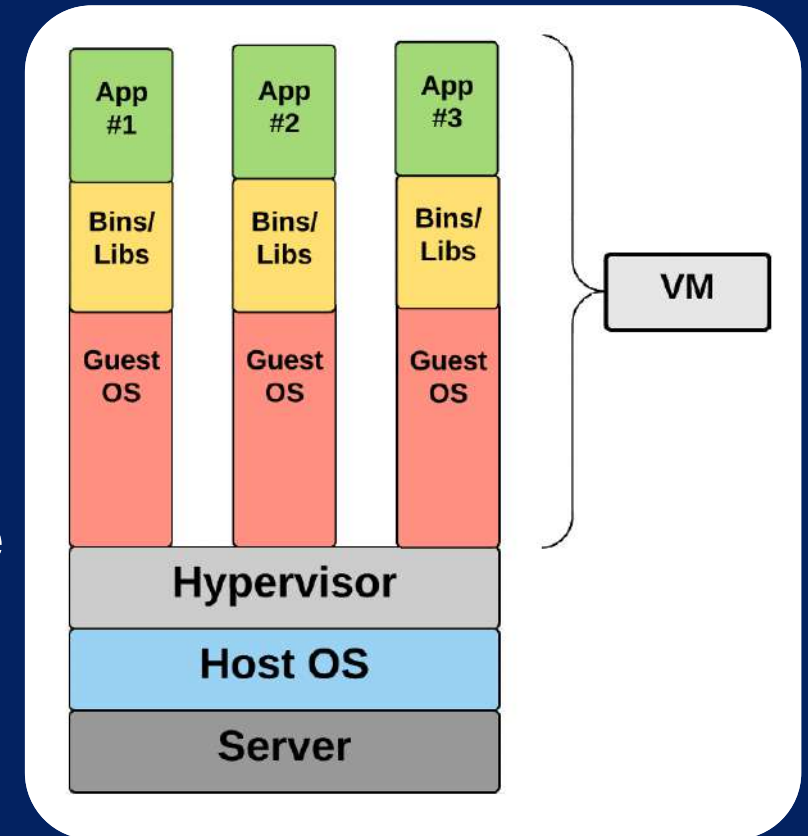

- What is Virtual Machine Software?
  - Imitate a Physical Computer System
  - Install OS virtually with the help of host OS
  - Multiple OS can run from a single VM Software

# Installing Ubuntu using Virtual Machines

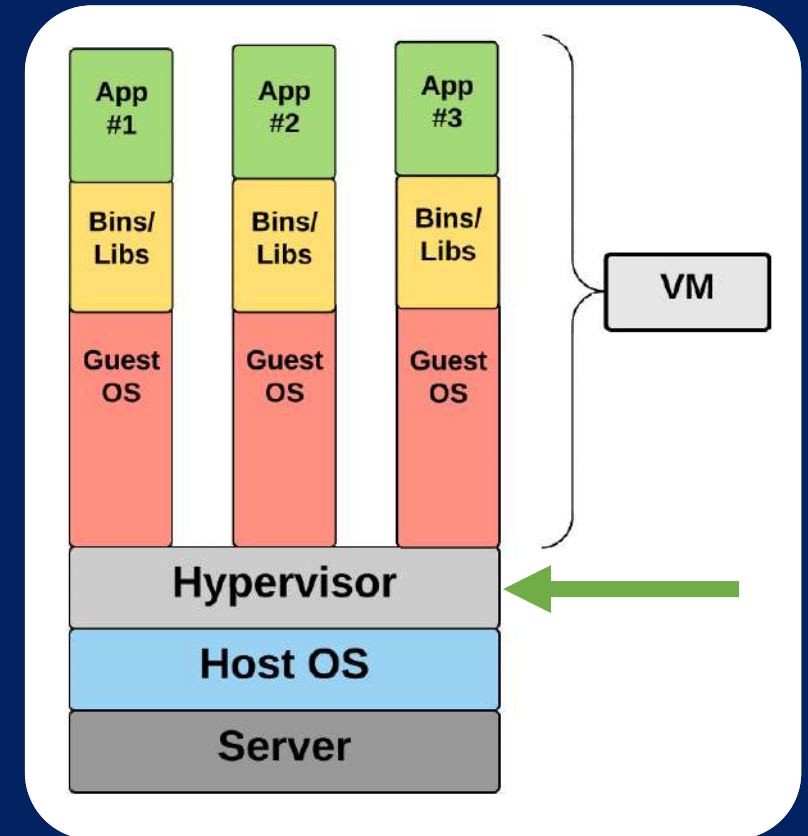

- What is Virtual Machine Software?
  - VM Software need host operating system to run  
E.g.: Windows/Linux/Mac
  - The Virtual OS/Guest OS share resources of the host OS.
  - Custom VM configuration

# Installing Ubuntu using Virtual Machines

- What is Hypervisor in VM Software?
  - Program which helps to create and run one or more VM simultaneously
  - Virtual Machine Monitor (VMM)

# Installing Ubuntu using Virtual Machines

- Popular VM Software
  - Oracle VirtualBox
  - VMWare Workstation Player

# Installing Ubuntu using Virtual Machines

- What is Oracle VirtualBox?
  - Free & Open-source x86 and AMD 64/Intel 64 Virtualization Software from Oracle
  - Supported host Platform: Windows, Linux, Macintosh and Solaris
  - Supported guest Platform: Windows, Linux, DOS, Mac, Solaris, OpenBSD etc.

# VirtualBox

## Welcome to VirtualBox.org!

[Login](#) [Preferences](#)[About](#)[Screenshots](#)[Downloads](#)[Documentation](#)[End-user docs](#)[Technical docs](#)[Contribute](#)[Community](#)

VirtualBox is a powerful x86 and AMD64/Intel64 [virtualization](#) product for enterprise as well as home use. Not only is VirtualBox an extremely feature rich, high performance product for enterprise customers, it is also the only professional solution that is freely available as Open Source Software under the terms of the GNU General Public License (GPL) version 2. See "[About VirtualBox](#)" for an introduction.

Presently, VirtualBox runs on Windows, Linux, Macintosh, and Solaris hosts and supports a large number of [guest operating systems](#) including but not limited to Windows (NT 4.0, 2000, XP, Server 2003, Vista, Windows 7, Windows 8, Windows 10), DOS/Windows 3.x, Linux (2.4, 2.6, 3.x and 4.x), Solaris and OpenSolaris, OS/2, and OpenBSD.

VirtualBox is being actively developed with frequent releases and has an ever growing list of features, supported guest operating systems and platforms it runs on. VirtualBox is a community effort backed by a dedicated company: everyone is encouraged to contribute while Oracle ensures the product always meets professional quality criteria.
